KEYS TO SUCCESS

- Growing better, not bigger. Land constraint was our biggest ally
- Left out the tractors and focused instead on horticultural and management strategies. Ex. Weed prevention VS weed control
- Initial farm design was a home run. Circle pattern, permabeds, standardizing, field blocs, crop rotation etc...
- Initial investments were not huge. 40K got us going
- **Worked on efficiencies year, after year, after year. Everywhere. All the time.**

“Minutes saved here and there become
hours, become days, become years”
