

SFA Product Information Pack — Index & How to Use

Prepared by: team_100 (Chief System Architect) · **Date:** 2026-06-03 · **Status:** v1.0 — product-disclosure & marketing-research base **Subject:** SmallFarmsAgents (SFA) — the live platform at <https://sfa.nimrod.bio> **Purpose:** a self-contained research corpus for **NotebookLM** to (a) generate marketing materials for customers, the community, and business partners, and (b) support deep product-development planning. Every document is also provided as a **PDF** (in pdf /) because the NotebookLM environment ingests PDFs.

What SFA is, in one paragraph

SFA (SmallFarmsAgents) is an **open, free-to-use community platform for Israel's organic and small-scale farming market**. It has two live products — a **Crop Book** (an agronomic knowledge base turned calculator-driven planning tool: ~66 crops / ~368 varieties, a 13-topic taxonomy, 14 planning calculators, two-audience UX) and a **Market Index / OrganicMarketAgent** (a community price index for organic produce) — both served from sfa.nimrod.bio. Its distinguishing strength is a **rigorous, provenance-tracked, multi-source data model** (confidence scoring, trust tiers, a $\tau=0.40$ validation gate) so every agronomic value carries a visible trust signal. Positioning: "כלים פתוחים לחקלאות קטנה" — **open tools for small-scale farming**, no signup, free core.

Documents in this pack

#	File	What it covers	Primary use
00	00_INDEX_AND_HOW_TO_USE.md	This index + audience map + usage notes	Orientation
01	01_PRODUCT_OVERVIEW.md	Mission, the two products, access ladder, value per audience	Marketing · partners
02	02_MARKET_CONTEXT_AND_AUDIENCES.md	Israel organic/small-farm market, problems, audience map, positioning	Marketing · strategy
03	03_CROP_BOOK_FEATURES.md	Crop Book deep feature catalog: 14 calculators, AssumptionFields, UX, states	Product · marketing
04	04_MARKET_INDEX_OMA.md	The community price index: sources, freshness, disclaimer, UX, limits	Product · marketing
05	05_DATA_MODEL_AND_PROVENANCE.md	Field taxonomy, multi-source enrichment, confidence/trust tiers, field_state	Technical · trust story
06	06_TECHNICAL_ARCHITECTURE.md	Two-tier architecture, ingest contract, stack, app-shell, design system	Technical planning
07	07_DELIVERY_DEPLOY_OPS.md	3-host topology, deploy pipeline, cron, security, ops constraints	Technical · ops
08	08_ROADMAP_AND_FUTURE_MODULES.md	What shipped (S001→S003), future modules, server-side ideas backlog	Planning · partners

#	File	What it covers	Primary use
09	09_GTM_MESSAGING.md	Positioning, elevator pitch, audience narratives, proof points, FAQ	Marketing
10	10_GLOSSARY_AND_KEY_FACTS.md	Canonical terms + authoritative facts/ numbers (grounding anchor)	All — accuracy

How to use this pack in NotebookLM

1. **Upload all PDFs** from the pdf/ subfolder as sources (the .md files are the editable originals).
2. **Ground accuracy on doc 10** (10_GLOSSARY_AND_KEY_FACTS) — it lists the canonical numbers and the LIVE-vs-PLANNED-vs-PROPOSED status of every capability. When generating any claim, prefer doc 10's facts and **respect the status tags** (do not present PLANNED/PROPOSED items as shipped).
3. **By goal:** - *Customer / end-user marketing* → 01, 03, 04, 09 (+ 02 for framing). - *Community outreach* → 01, 02, 04 (community surface), 09. - *Business-partner / investor materials* → 01, 02, 08, 09, with the trust story from 05. - *Product-development planning* → 05, 06, 07, 08 (+ 03/04 for feature baselines).
4. **Status discipline (important):** capabilities are tagged **LIVE** (shipped on sfa.nimrod.bio), **PLANNED** (future modules CB-2..CB-5, LOD100 direction only), or **PROPOSED** (server-side ideas SRV-1..5, unapproved). Never blur these lines in generated copy.

Provenance of this pack

Authored by team_100 from the SFA repository's authoritative sources: _aos/context/ PROJECT_CONTEXT.md , the documentation/ tree (architecture, data-schema, pipelines, ops, design-system), the locked work-package specs (the data-model Canon WP-CB-0, the calculator tool WP-CB-1, the enrichment layer WP-A), _aos/roadmap.yaml , and the live delivery-tier code (sfa_delivery/ , organic_market_agent/). It reflects system state as of **2026-06-03** (S003-P004 program closed; both Crop Book v1 + Class B surfaces live). The pack is in **English** (the project's documentation language); Hebrew product/UI terms are given in parentheses to aid localized material.
